Education

Georgia Institute of Technology — *B.S. Computer Science*

May 2028

- GPA: 4.0/4.0
- Coursework: Data Structures & Algorithms, Computer Organization, Objects & Design, Networking, Machine Learning
- Activities: Big Data Big Impact (Project Lead), SynapseX (Streaming & Integration Lead)

Skills

- **Languages:** Python, Java, C++, TypeScript/JavaScript, SQL, Swift, Bash
- **Frameworks & Web:** React Native, Next.js, Angular, FastAPI, Flask, Spring Boot, Node.js/Express, REST, GraphQL
- **AI/ML:** PyTorch, Scikit-learn, NumPy, Pandas; Hugging Face, LangChain/LangGraph, OpenAI/Anthropic SDKs, Pinecone
- **Cloud & DevOps:** AWS (Bedrock Lambda, S3, EKS, DynamoDB), Docker, Terraform, CI/CD (GitHub Actions)

Experience

Travelers — *Software Engineering Intern*

Jun. 2026 - Present

- Architected a serverless, event-driven multi-agent AI system on Amazon Bedrock, Lambda, & API Gateway that auto-triages ServiceNow tickets for a 150+ user, 8,000+ job/day data platform, cutting diagnosis time from ~60 min to <5.
- Built a supervisor-collaborator agent architecture where a classifier delegates to a retrieval-augmented (RAG) diagnostician backed by an Amazon Bedrock Knowledge Base, producing grounded root-cause diagnoses that reduce hallucinations.
- Engineered an approval-gated feedback loop where a resolver agent writes human-verified resolutions back into the RAG knowledge base via an S3-triggered pipeline, with state in DynamoDB and traceability across 37 resolved tickets.
- Instrumented services with Dynatrace and Graylog for latency, error, and resolution-success metrics; packaging as an internal tool on AWS EKS (in progress) with an Angular + Spring Boot UI, Terraform, and GitHub Actions CI/CD.

RIA Advisory — *Software Engineering Intern*

May 2025 – Aug. 2025

- Automated recurring revenue and billing processing in Oracle ORMB via Python ETL pipelines on AWS Lambda and S3.
- Built data validation and reconciliation checks verifying record completeness and billing integrity before reaching production.
- Trained an sklearn Random Forest model w/ 0.88 precision/0.79 recall to flag billing anomalies, finding 21 misbilled records.
- Engineered RESTful API endpoints in Spring Boot and MySQL for pricing workflows on an Agile/Scrum team.

Big Data Big Impact — *Project Lead (Incoming Fall)*

Jan. 2026 – Present

- Leading Graption, an accessibility platform for speaker-aware live captions and missed-context recovery (Hacklytics @ GT winner), leading ML system design for a 15 person team across multimodal perception.
- Training a multimodal active-speaker classifier in PyTorch to 0.74 F1 on 8 hrs of audio-video, fusing CNN log-mel audio embeddings with lip and gesture features via a transformer.
- Built the real-time pipeline with MediaPipe, Whisper, & sound-event classification, sustaining 30 FPS & sub-1.5s latency.

Signifi — *Founder & Lead Developer; CreateX S26 Batch*

Feb. 2026 – Present

- Built and lead an AI-native product management platform serving 3 pilot teams that turns a single product brief into aligned PRDs, user stories, prototypes, and delivery timelines via orchestrated planner/worker LLM agents (model-agnostic).
- Engineered the pipeline on JSON outputs & a shared run state, keeping linked artifacts consistent across 15+ agent steps.
- Shipped real-time web/mobile prototype rendering and AI research/editing on Next.js/TypeScript, Supabase, and Vercel.
- Backed by \$25K Microsoft for Startups funding; Klaus Startup Challenge Finalist; early testing with Cox Automotive staff.

Projects

Aerospace Robotics Lab @ Georgia Tech — *Undergraduate Research Assistant*

- Built a ROS2+MuJoCo multi-agent spacecraft simulator coordinating 8 agents at 500 Hz physics fidelity, integrating physics-based modeling, GNC, & formation control with onboard computer vision pipelines for perception-driven coordination.
- Trained decentralized ML models on ~ 500 simulation rollouts for trajectory optimization, reducing fuel cost by ~ 20%.

FinMate — *codeLinc10 Hackathon Winner*

- Built an AI financial-benefits assistant on a Bedrock RAG pipeline with Claude Sonnet, Titan embeddings, and S3 retrieval.
- Served retrieval through Next.js with AWS API Gateway and Lambda, answering 13/15 questions on an internal eval set.
- Added Claude tool calling to update the dashboard, with Bedrock Guardrails, CloudWatch, and least-privilege IAM.

Gridly — *Best Use of Vultr @ EnergyHack GT*

- Built a smart-plug IoT platform with bidirectional WebSocket control, remotely operating plugs in Kennesaw from Atlanta.
- Served device control through a Vultr VPS API, with grid data from the Electricity Maps API stored in PostgreSQL.
- Used Vultr AI Agents emitting structured JSON to auto-schedule charging around user requests and low-carbon windows.
