Education

Georgia Institute of Technology — *B.S. Computer Science, GPA: 4.0/4.0* May 2028

- **Coursework**: Data Structures & Algorithms, Computer Organization, Objects & Design, Networking, Machine Learning
- **Activities**: Big Data Big Impact (Project Lead), SynapseX (Streaming & Integration Lead), iOS Club (Project Team)
- **Awards**: 5x Hackathon Winner (Hacklytics, Bitcamp, codeLinc, EnergyHack, Jane Street Mystery Planet); AIME Qualifier

Skills

- **Languages:** Python, Java, C++, TypeScript, JavaScript, SQL, Swift, Bash, Ruby, HTML/CSS
- **Frameworks:** React, Next.js, Angular, FastAPI, Spring Boot, Node.js, Express, REST, gRPC, GraphQL, Django
- **AI/ML:** TensorFlow, PyTorch, Keras, Scikit-learn, NumPy/Pandas, LangChain/LangGraph, OpenAI/Anthropic SDKs
- **Cloud/DevOps:** AWS, GCP, Docker, Kubernetes (AWS EKS), Helm, Redis, Terraform, CI/CD (GitHub Actions)
- **Tools & Data:** Git, PostgreSQL, MySQL, MongoDB, Playwright, Selenium, pytest, JUnit, Agile/Scrum, Claude Code

Experience

Travelers — *Software Engineering Intern* Jun. 2026 - Aug. 2026

- Built an **event-driven multi-agent AI incident-triage service** that cut ServiceNow ticket diagnosis time from ∼60 min to 5 for a platform running 8K+ daily jobs, using **Python** on **AWS** Bedrock AgentCore, Lambda, S3, SNS, & EventBridge.
- Raised root-cause accuracy to **∼90%** across 68 resolutions by orchestrating **4 supervisor-collaborator LLM agents** with **RAG** over 200+ docs, using Titan embeddings and hybrid k-NN/BM25 search in **Amazon OpenSearch**.
- Enabled **human-in-the-loop** review for 3 teams via a **React (TypeScript/JavaScript)+FastAPI** portal using SSE, **MongoDB** change streams, **Redis** queues, Okta OAuth 2.0, & **REST integrations** with Jira, Confluence, & ServiceNow.
- Kept agent knowledge current with recurring **ETL pipelines** (EventBridge cron, S3 triggers) that ingest docs & engineer fixes into **Bedrock Knowledge Bases** as a **feedback loop**, and load tickets & resolutions into **Snowflake** via **SQL**.
- Contributed to deployment using Docker, **Kubernetes (EKS)**, Helm, Terraform, GitHub Actions **CI/CD**, & Dynatrace.

RIA Advisory — *Software Engineering Intern* May 2025 - Aug. 2025

- Automated **ETL pipelines** into ORMB using Python, AWS Lambda, and S3, reducing revenue processing time by 35%.
- Caught **15+ defects** pre-release with **pytest** unit/integration tests and **SQL** reconciliation checks on MySQL tables.
- Flagged **21 misbilled records** by training an sklearn Random Forest (0.88 precision/0.79 recall) on 100K+ SQL rows.
- Cut pricing lookup latency by designing REST endpoints in **Spring Boot (Java)** over indexed MySQL tables.

Big Data Big Impact — *Project Lead; Hacklytics @ GT winner* May 2026 - Present

- **Leading a 15-person team** building **Graption**, a multimodal ML system to provide speaker-aware captions for the deaf.
- Training a multimodal active-speaker detection model in **PyTorch**, fusing CNN log-mel audio embeddings with lip & gesture features via a cross-attention transformer, lifting F1 from 0.61 to **0.74** on 8 hrs of AV data.
- Built a real-time **Whisper/MediaPipe** streaming pipeline at **30 FPS & sub-1s latency** on **AWS**: Dockerizing FastAPI + WebSocket services on ECS, face-embedding retrieval via S3/DynamoDB (<50 ms), **PostgreSQL** on RDS.

Signifi — *Co-founder & Lead Developer; CreateX S26 Batch; signifi.tech* Feb. 2026 - Present

- Architected an **AI-native product management platform** serving **6 pilot teams** that turns briefs into PRDs, user stories, prototypes, & timelines via multi-agent LLM orchestration (LangGraph, tool calling).
- Raised spec retrieval accuracy via **RAG (pgvector) & MCP connectors** for Atlassian, Drive, Canva, & Figma.
- Built PRD-based web/mobile **prototype generation** (Next.js, TypeScript, Supabase) & a **SwiftUI iOS** companion app.
- Raised eval pass rate **72%→94%** via LLM eval harnesses & **LangSmith tracing**; backed by $25K Microsoft for Startups.

Projects

Aerospace Robotics Lab @ Georgia Tech — *Undergraduate Research Assistant* Jan. 2026 - Present

- Engineered a ROS2 + MuJoCo multi-agent spacecraft simulator in **C++ and Python** running 8 agents at 500 Hz, integrating GNC, formation control, and onboard computer vision for perception-driven coordination.
- Trained decentralized **MAPPO policies** for 8-agent formation reconfiguration over 5M environment steps, cutting total Δv 18% vs. an LQR baseline across 200 held-out scenarios while keeping formation error under 0.5 m.

EchoLocate — *Bitcamp Hackathon Winner* Apr. 2026

- Built an **AI-powered cybersecurity incident investigation platform** using **8 specialized LLM agents** in **LangGraph**.
- Enabled log, network, file, and timeline agents to reason over shared evidence via a **RAG**-grounded investigation graph.
- Streamed live agent events to an interactive **JavaScript/React** UI over **Socket.IO** with graph-based evidence visualization.
